

Water filtration for industry

Can Water₂Water help us improve efficiency?

- ◆ **Almost certainly** From isolated mining operations to city centre building sites, providing large workforces with fresh, clear drinking water every day is what we do best.
- ◆ **Reduced down-time** We help your team rehydrate quickly and easily so they can be straight back on the job.

What's the best solution for my workforce?

- ◆ **Tailored solutions** Water₂Water's Product Advisors will visit your work site and determine the system that best suits your needs. Commonly used systems are
 - **Industrial Reverse Osmosis Plants (see below)** and
 - **Water Dispensing Units (see over page)**

Industrial Reverse Osmosis Plant

- ◆ **Fast rate of filtration** It produces 1,000-40,000 litres of safe drinking water every 24 hours, stored in large, fast filling storage tanks ensuring a constant supply of water.
- ◆ **Small portable units** 1 metre high and lightweight.
- ◆ **Quality design** • High pressure pump and motor • High rejection thin film R/O membrane • Stainless steel frame • Pressure regulator valve • Tank full shut off switch • Automatic fast rinse flush • Low pressure safety shut off switch • Flow meter • Liquid filled high pressure gauges • Electronic manual controls.
- ◆ **Optional extras** • UV sterilisation at twice the required level for extra safety • Heavy duty tank with electronic float valves • Constant pressure • Quiet operational compact Grundfos pump.
- ◆ **Ready to go** Factory sterilised with a comprehensive warranty ready for connecting to the water source.
- ◆ **Servicing** Regular scheduled servicing is a priority at Water₂Water. We ensure your plant is always working at its best for many years to come.

"Many thanks for getting our water system up and running at Bannockburn. As you can imagine the lack of "on - call" potable water and ice has been a major issue (health and morale) for the entire team so it's fantastic to have this addressed at last. I have been sent some photos down via email - very neat job, and much more compact than I had imagined."

Steve Vallance
Chief Geologist - Exploration
Jubilee Mines NL,
Bannockburn Project,
Sinclair Nickel Deposit

Water Dispensing Unit

- ◆ **Safe and clean** If you want a fully-enclosed system that can't be contaminated by dirty hands, then a Water Dispensing Unit may be the solution for your business.
- ◆ **Easy to use** Push button operations mean the system is as easy to use as a commercial drinks vending machine.
- ◆ **For large teams** The plant produces 6000 litres of filtered water every 24 hours suitable for a large workforce such as mine operations, shutdown crews, isolated camps, large road gangs and building sites.
- ◆ **Quality design** Other standard features include
 - Fast filling water storage tanks (room temp 120 litres
 - Cold 160 litres)
 - Fast dispensing pumps
 - 4 x dispensing button that can be calibrated to any requirement
 - 6 solenoid valves for controls and safety
 - Reverse osmosis and hot UV auto flush system
 - Strong marine fibreglass construction.
- ◆ **Regular Servicing** No matter how isolated your location, we will keep your systems regularly serviced to ensure optimum water quality is maintained. At Water₂Water it's our servicing that sets us apart from the rest.

Does the unit take up much space?

- ◆ **No** It only takes up one square metre.

Can the system maintain a high standard of water purity?

- ◆ **On-going purity** With state-of-the-art UV sterilisation at twice the required rate as standard, you can be assured water quality is kept at an optimum.

Call a Water₂Water Product Advisor today to hear more about these and other ways to keep your site workers hydrated.

“As the operations manager of a large mine site, one of my jobs is to create the best possible environment for the workforce. In 45°C heat, there is nothing more essential than a quality water supply. Water₂Water installed our system and also make sure it's regularly maintained, despite our isolation.”
