

# Premium 4 Stage Reverse Osmosis

## Reverse Osmosis

- ◆ **Ultra effective** Reverse Osmosis is used in ultra effective water filtration systems which reduces 99% of all dissolved organic and inorganic impurities from drinking water including salts, metals, chemicals, bacteria and viruses, leaving behind only pure, clear water.
- ◆ **Sensitive Diets** This product produces almost pure drinking water and is suitable for those with sensitive diets.

## How does it work?

- ◆ **1st stage** Sediment Filter  
This initial stage removes impurities such as silt, rust, sand, algae sediment, scale particles and dirt.
- ◆ **2nd stage** Carbon block  
The second stage of the process removes herbicides, pesticides, chlorine and chlorine bi-products, which in turn helps protect the membrane.
- ◆ **3rd Stage** The heart of the system  
Our 50 gpd membrane removes 98% of impurities including organic and inorganic chemicals.
- ◆ **4th stage** Final Stage  
The final stage 'polishes and smooths' the water making it 'soft' in texture.

## Are there any disadvantages?

- ◆ **Water Usage** Reverse osmosis uses 3 – 4 litres of water per 1 litre of filtered water produced.
- ◆ **Removes vital minerals** It strips out 95% of water's naturally occurring minerals.

## What about ongoing maintenance support?

- ◆ **Absolutely** Our comprehensive maintenance program means our skilled technicians will visit at regular scheduled intervals to change filters, clean and sanitize the system. Alternatively, a Do-It-Yourself (DIY) maintenance kit is available.

**“For personal health reasons, I’m always careful to drink the recommended amount of water every day. Also I wanted a system installed in my home that assured me of drinking water which is as pure and chemical free as possible. I am very pleased with this product, it gives me peace of mind knowing that my drinking water is the best quality possible.”**

## Does it come with a stylish faucet?

◆ **Stylish range** Water2Water has sourced a range of quality, designer faucets to choose from which look great in the home and office. With the touch of a lever, you are assured of the ultimate in clear, fresh water.

## Can my water be chilled using this process?

◆ **Optional chiller** Yes, an under sink chiller can also be attached to ensure that cool, refreshing water is not only easily accessible but also doesn't take up valuable space in the fridge. But if ambient temperature water is required for cooking, filling the kettle or rinsing vegetables, then with the push of a button you can simply select that option.

## What contaminants does it remove?

Detailed below is an analysis report on the inorganic and organic minerals removed using this method:

Inorganic		Organic	
Aluminium	98%	Adrazin	Over 98%
Arsenic	98%	Aldrin	Over 98%
Asbestos	99%	Benzene	Over 98%
Barium	95%	Chlorine	Over 98%
Cadmium	95%	Chloroform	Over 98%
Calcium	98%	DDT	Over 98%
Chloride	95%	Dichlormethane	Over 98%
Chromium VI	98%	Endrin	Over 98%
Copper	98%	Fluoranthene	Over 98%
Fluoride	95%	Herbicides	Over 98%
Iron	98%	Lindane	Over 98%
Lead	98%	Methoxychlor	Over 98%
Magnesium	98%	PCB	Over 98%
Manganese	98%	Pesticides	Over 98%
Mercury II	85%	Perchlorethylene	Over 98%
Nitrate	90%	Phenole	Over 98%
Potassium	95%	Tannic Acids	Over 98%
Selenium IV	95%	Toxaphene	Over 98%
Silver	98%	Trichlorethlene	Over 98%
Sodium	95%	Trihalomethanes	Over 98%
Strontium	98%	V.O.C's	Over 98%
Sulphate	98%		
Total Dissolved Solids	95%		
Zinc	98%		

## Customer Advice - Turn off for holidays.

If you are leaving your premises unoccupied for an extended period eg long weekends, holidays etc always turn off your filtration system at the isolation valve (usually located under the sink).

**A 2 year unconditional warranty is provided on filter housings when system is installed by Water2Water. Ask about our Lifetime Warranty.**
