

Premium Twin Undersink System

Premium Twin Undersink CC1 System

Why do you need it?

◆ **Water concerns** The increase of pollutants which are finding their way into our water supply are causing consumers to demand products that filter our drinking water, to ensure it is pure and clean.

◆ **Simple solution** At Water₂Water, our Premium Twin Undersink Systems filter out harmful bacteria, viruses, pesticides and herbicides and reduce harmful chemicals.

What are the benefits?

◆ **Retains minerals** Despite being thoroughly filtered, our Premium Twin System allows your tap water to retain important minerals that the body needs, including fluoride. What's more, no water is wasted during the filtration process.

How does it work?

◆ **Discreet & effective** Water₂Water's twin undersink filtration system is plumbed in under the sink and provides busy households and offices with an unlimited amount of freshly filtered, great tasting water, straight from the tap.

How often will I have to change the filter?

◆ **That depends** The number of filter changes required are dependent on the quality of your source water and the volume of water usage.

◆ **Regular servicing** For added convenience and so that you don't need to worry about the quality of your filtered water, a comprehensive maintenance program is offered with all of our systems. Our skilled technicians will visit at scheduled intervals to change the filters and clean and sanitize the system.

◆ **Do-It-Yourself** Alternatively a DIY kit is available, along with simple instructions.

"I have had the twin system installed at work for the last 4 years and I'm very pleased with it. Our tap water now tastes exceptionally refreshing and I have peace of mind of knowing that many harmful chemicals are filtered out, whilst fluoride and other important minerals that are important to the body are retained."

Paul Friedmann

Does it come with a stylish faucet?

◆ **Stylish range** Water₂Water has sourced a range of quality, designer faucets to choose from, which look great in the home and office. With the touch of a lever, you are assured of the ultimate in clear, fresh water.

Can my water be chilled using this process?

◆ **Optional chiller** Yes, an under sink chiller can also be attached to ensure that cool, refreshing water is not only easily accessible but also doesn't take up valuable space in the fridge. But if ambient temperature water is required for cooking, filling the kettle or rinsing vegetables, then with the push of a button you can simply select that option.

What contaminates does it remove?

Highly effective filtration The quality twin system not only removes unpleasant taste and odour, it also filters the following chemicals:

Additionally, the CC1 system is highly effective in removing copper, mercury, lead and Zinc.

Customer Advice

◆ **Turn off for holidays** If you are leaving your premises unoccupied for an extended period eg long weekends, holidays etc always turn off your filtration system at the isolation valve (usually located under the sink).

◆ **Operating conditions** Max Temp 40°C. Maximum pressure 700 kpa. Use only with biologically safe water supply

Note: The standard faucet included with our twin systems have a 45mm diameter base cover and hole size of 13mm.
