- › W2W has professional water filtration technicians across WA who carry Billi parts and filters and provide fast first-time fixes to get your system up and running quickly

### How does a W2W Billi Tap System work?

Billi Taps are mains fed on tap water dispensers and must be plumbed into the water supply under the sink.

The compact boiler/chiller/carbonating unit needs to be connected to a power supply and is designed to fit under most sinks – ensure adequate ventilation to avoid overheating.

W2W Billi Tap filters should be replaced every six to 12 months, depending on usage and source water quality. This protects internal components, maintains performance and guarantees water taste.

Water2water’s great value servicing and maintenance plans include regular filter replacement and system sanitisation. We have a team of qualified plumbers and water filtration technicians working across Western Australia.

Billi has been manufacturing instant chilled & boiling water taps in Australia for over 25 years.

We stock most Billi Taps models, filters and parts. Contact our friendly team today on **1300 880 303** to find out more.
