- › Perfect for homes and offices to keep your family, employees and visitors hydrated and happy
- › Available to rent (WA only) and buy

How does a W2W Zip HydroTap® work?

The advanced technology and stylish designs make the Zip HydroTap® one of the most popular all-in-one hot and cold water taps on the market.

Zip HydroTaps® must be plumbed into the mains cold water supply under the sink.

The “command centre,” which operates the water heating and chilling features, sits under the sink and needs to be connected to an electricity supply. **Ensure the command centre has adequate ventilation to avoid overheating.**

The Zip filter should be replaced every 6 to 12 months depending on how much water you use and the quality of the source water. This will guarantee the taste and quality of your drinking water and protect the chilling and heating components.

In Western Australia, Water2water's great value servicing and maintenance plans include regular filter replacement and system sanitisation.

We stock most Zip HydroTap® models, parts and filters, and provide an unrivalled service to customers across Western Australia. Contact our friendly team today on **1300 880 303**.
