- › No more waiting for the kettle to boil
- › User-friendly taps ideal for filling water bottles
- › Easy to combine with W2W filtration and water purifying systems to remove chemicals and contaminants in poor source water quality areas
- › Tax deductible business expense
- › Available to rent (WA only) or buy

### About W2W Hot and Cold Water Coolers

W2W Hot and Cold Water Coolers need to be connected to the mains water supply and plugged into an electrical point.

Much of Australia's source water has a very high mineral content and we recommend installing a water filtration system with your cooler.

This will guarantee unlimited pure, freshly filtered drinking water is always available and extend the life of your cooler.

Customers in Western Australia can rent a W2W Hot and Cold Water Cooler and take advantage of our comprehensive servicing and maintenance plans.

Our cost-effective plans include scheduled filter replacement in water filtration systems and thorough cleaning and sanitisation of your water dispenser and filter system.

Call us on **1300 880 303** for more details.

### Maintenance and servicing Water Coolers

Water2water's Hot and Cold water coolers are reliable and low maintenance.

We recommend combining your cooler with a W2W filtration system to remove up to 99% of contaminants from drinking water.

We offer comprehensive servicing and maintenance plans to customers in Western Australia.

One of our skilled water filtration technicians will visit at regular scheduled intervals to change filters and clean and sanitise your water cooler and filtration system.

Servicing and filter replacement included with most rental plans in most areas of Western Australia.
