How does a W2W Sparkling Water Bar Tap work?

W2W Sparkling Water Bar Taps must be plumbed into the mains water supply.

To guarantee the quality of your drinking water and extend the life of your system, we recommend using a mains-fed water filtration system to remove contaminants and chemicals from your water supply.

This will ensure high-quality drinking water is fed into the chiller and carbonating unit (not shown) that needs to be connected to an electricity supply.

Sparkling and chilled water is then ready for customers to enjoy via your choice of stylish bar top dispensing taps.

Water2water is always happy to provide free, unbiased advice on the best sparkling and chilled water and filtration solutions for your business based on demand and the quality of your local source water.
