

W2W Mineraliser Water Filter

Replace essential healthy minerals in your drinking water after water purification processes like Reverse Osmosis.

Ideal if you want to improve the nutritional quality and taste of the water you drink.

Includes: One 10" x 2.5" W2W Mineraliser Water Filter

W2W Mineraliser Water Filter

Restore the natural mineral content of filtered water to improve health, and muscle function and balance the pH value of purified and softened water.

- › Replaces vital minerals including calcium, magnesium and potassium in water that has been purified or distilled
- › Improves the taste of drinking water
- › Easily combined with mains-fed, twin under-sink and reverse osmosis filtration systems
- › Increases pH level to reduce acidity
- › Mineralising Filter cartridges last 6 to 12 months, depending on source water quality and how much water you use
- › Calcium is essential for bone health and the range of minerals adds nutritional value to drinking water
- › Commercial-sized Mineraliser Water Filters are also available
- › In-line filters are easy to connect to under sink, mains fed filtration systems, including Reverse Osmosis filter systems

How do W2W Mineraliser Water Filters work?

Staying hydrated by drinking plenty of water is vital to our overall health and well-being.

Water filtration processes like Reverse Osmosis and using a Water Softener to remove harmful contaminants and calcium are great for purifying mains water but they can strip out essential minerals.

A W2W Mineralising Water Filter restores healthy levels of calcium, potassium and magnesium to distilled or purified water.

Replacing minerals improves the taste of purified water and encourages us to drink more and stay hydrated and healthy.

Combining an easy-fit W2W Mineraliser Water Filter with a plumbed in water filtration system is the easiest way to ensure your drinking is free from harmful metals, chemicals and contaminants **and** still contains healthy minerals.
