

W2W Zip® WM Filtered Boiling Water Unit

Keep employees happy and increase productivity with up to 150 cups of instant boiling water every hour.

Combined with an under sink scale reduction filter system to remove dirt, bacteria and contaminants and reduce scale build-up.

Energy-efficient and time-saving boiling water dispenser for hospitality and workplaces of all sizes.

W2W Zip® Wall-Mounted Filtered Boiling Water Dispenser

Cost-effective and energy-saving alternative to kettles and vending machines for busy staff kitchens and work canteens

- › **W2W Zip® Econoboil Wall-Mounted Boiling Water Unit** provides 50 cups of boiling water at one time and 150 cups every hour
- › **W2W Maxiflow Scale Reduction Filter System** removes up to 99% of dirt, chlorine, bacteria and contaminants and helps break down calcium to reduce scale buildup on the Zip water heating system
- › Thermostat temperature control and classic two-way tap
- › Hard-wearing and low-maintenance 7.5L hot water dispenser for high-traffic worksites
- › Easily upgraded with a Reverse Osmosis scale reduction filtration system in areas with poor-quality source water
- › Save energy and increase productivity – no more waiting for the kettle to boil
- › Available to rent (WA only) and buy
- › Low-cost servicing, repairs and maintenance plans for clients in Western Australia
- › Regular filter replacement, system sanitisation and servicing are included with many rental plans (WA only)

Is a W2W Zip® Filtered On-Wall Boiling Water Unit right for you?

The Zip® Econoboil wall-mounted boiling water system is a great way to provide hot drinks for employees in large offices and worksites.

The W2W Maxiflow Water Filter System with scale reduction is plumbed into the mains water supply and feeds contaminant-free, filtered drinking water into the Zip Econoboil, which requires a 10amp general power outlet (GPO).

Scale reduction filters break down minerals, which helps reduce calcium buildup and protect the boiling water unit's heating components and performance.

Much of Australia's "hard" water supply has high levels of calcium and contaminants, and scale reduction filters purify water, help prolong the life of your hot water system and improve water quality and taste.

Filters should be replaced every 6 to 12 months.

We sell, rent and service (WA only), a range of Hot, Cold, Chilled and Sparkling Taps and water filtration systems for businesses of all sizes.

Contact our friendly team today on **1300 880 303**.

Zip Econoboil® On-Wall Boiling Water Dispenser
