- › Compact mains fed **W2W 8L Under Sink Water Chiller** provides 8 litres – 50 glasses - of chilled water every hour
- › Filtration system retains the important minerals our body needs
- › The space-saving system sits under the sink leaving countertops uncluttered
- › Environmentally-friendly – no more harmful plastic water bottles
- › Can be upgraded to a Reverse Osmosis filter system in areas with poor quality source water – contact us for details

How does the W2W Filtered 8L Under Sink Water Chiller work?

The W2W Filtered 8L Under Sink Water Chiller must be plumbed into the mains water supply under the sink and connected to a power supply.

The twin sediment and carbon filter system removes unwanted chemicals and harmful contaminants from incoming mains water and feeds clean, safe drinking water into the refrigerated water chiller.

You need to drill a hole into your sink top to attach the dual faucet for dispensing ambient and chilled water.

You must ensure adequate airflow and ventilation around the water chiller unit to prevent overheating.

Filters need be replaced every six to 12 months depending on how much water you use and the quality of your source water.

This will protect the internal refrigeration components, maintain performance and guarantee water taste.

Contact our friendly team today **1300 880 303** to find out more.
