- › Mains fed water - no more environmentally harmful, heavy plastic water bottles
- › Available to rent in most areas of Western Australia with regular filter replacement and servicing included with many rental plans

### Is a W2W Slimline Filtered Water Cooler right for you?

This filtered water cooler system provides unlimited clean, fresh hot and/or chilled & ambient drinking water for up to 30 daily users.

The W2W Maxiflow 5-micron mains-fed water filter system purifies the incoming cold water supply and feeds the Water Cooler with contaminant-free drinking water.

The compact filter system sits under the sink and connects easily to the water cooler, which needs to be plugged into a power supply.

Once connected, your water cooler chills and / or heats filtered water before dispensing it via the user-friendly taps.

To protect drinking water quality, filters should be replaced every 6 to 12 months depending on source water quality and usage.

Our low-cost servicing and preventative maintenance plans (included with many rentals), take care of everything – including regular filter replacement and system sanitisation.

Call us today on **1300 880 303** for more information.
