

W2W Automatic Water Softener

Enjoy softer skin and hair and remove unsightly calcium and scale build-up on your shower screen, kettle and household appliances.

This high-quality, Australian-made automatic water softener removes calcium, iron and magnesium from your mains water supply.

W2W Automatic Water Softener System

Low maintenance, fully automatic water softener capable of treating 40 litres of water per minute as it enters your home or workplace.

- › Remove calcium, iron and magnesium to enjoy purer, softer water which is kinder to sensitive skin
- › Combine with a W2W Whole Home Water Filtration System to remove chemicals, bacteria and contaminants for the ultimate soft, fresh, clean drinking, cooking and bathing water
- › Prolongs the lifespan of dishwashers, hot water systems, AC units, kettles and washing machines by removing calcium carbonate (limescale) build-up
- › 17,000 litre capacity, Australian-made robust moulded plastic brine tank cabinet
- › Ideal for homes, businesses, hairdressers, cafes, restaurants, workshops and car washes – larger capacity softeners also available
- › Full range of Automatic and Semi-Automatic Water Softeners available – please contact us for details
- › Reliable and durable point-of-entry mains water softener systems for treating “hard” water.

How does a W2W Automatic Water Softener work?

Water Softeners plumb into your mains water as it enters your home or business premises.

The resin filter removes calcium, iron and magnesium from the water before it is fed to your faucets, shower, appliances and throughout the property.

Regular regeneration of your water softener system flushes away the caught minerals and maintains the quality of your water. The process is like the salt rinse cycle used in dishwashers.

Combining a W2W Water Softener with a mains-fed whole house water filtration system will remove harmful pesticides, dirt, chemicals and contaminants, and improve the taste of your drinking water.

Water2water specialises in creating tailor-made whole home water filtration systems for domestic and commercial customers.

We are always happy to provide free, unbiased advice on the best water filtration system for your home and business. Call us today on **1300 880 303**.

Automatic Water Softeners

Also known as 'Volumatic'

A microprocessor constantly monitors water usage, and a daily reserve capacity is set, based on your water quality.

When softened water reserves get low, the softener automatically regenerates at a pre-set time (usually overnight).

Automatic softeners require 240 volts to operate. There is a 24-volt "step down" transformer for outdoor electrical safety.

Salt Usage

W2W Water Softeners require salt to flush away collected minerals during regeneration. This process does not affect the taste of softened water.

Specifications	Automatic Water Softener
Description	One piece roto moulded plastic cabinet with lid, containing salt and brine storage in the unit
Capacity	17,000 litres at 100 mg/l hardness
Resin Capacity	28 litres of high grade softening resin Fleck 5800 microprocessor 5-stage with regeneration
Control Valve	All functions fully adjustable Valve controls brine refill
Pressure Vessel	Thermowound fibre glass with blow moulded seamless liner
Flow Rate	Continuous = 35 litres per minute Peak = 40 litres per minute
Pressure	Maximum = 600 kPa (85psi) Minimum = 175 kPa (25 psi)
Pipe Sizes	Inlet/Outlet = 3/4" (20mm) Drain = 1/2" (15mm)
Salt Storage	50kg capacity
Salt Usage	4.5kg per regeneration
Dimensions	H110 x W470 x D34 cms
Weight	47kg (dry)
Voltage	240 volts operation

W2W Automatic Water Softener with a mains-fed Twin Whole House Water Filter System for complete home filtration.

W2W Water Softener System Installation

Plumbing a water softener to the mains water supply at the point of entry should be carried out by a qualified plumber or water filtration technician.

Maintenance and Sanitisation

W2W Water Softeners are low maintenance and hard-wearing.

We recommend regular checks by a water filtration technician to make sure the softener is working at optimum capacity.

For clients in Western Australia, we offer comprehensive servicing and maintenance plans including regular filter replacement and system sanitisation.

Water Softener Range

We offer a wide choice of automatic and semi-automatic water softeners with different capacities to meet your needs.
