

## W2W Twin Filter System

**Our best-selling under-sink water filtration system removes harmful contaminants and leaves healthy minerals, giving you a constant supply of great-tasting, freshly filtered drinking water.**

Connects easily to your cold water supply and comes with a slimline sink top faucet.

Includes Sediment and Carbon filters, faucet (design may vary) and basic plumbing fittings.

### Water2water Twin Filter Systems

**Powerful carbon and sediment filters remove chlorine, pesticides, dirt and other contaminants from your water supply with no wasted water, to keep you and your family hydrated and healthy.**

- › Unlimited supply of freshly filtered, great-tasting drinking water, straight from the sink top faucet (included)
- › Retains the important minerals our body needs
- › Removes harmful bacteria, viruses, pesticides, and herbicides
- › Compact and plumbs in under the sink leaving counter tops uncluttered
- › More cost-effective than bottled water and kinder to the environment
- › Easy to combine with additional filtration like reverse osmosis to suit areas with poor-quality mains water
- › W2W Twin Filter System with Copper Reduction filter option available to reduce copper, lead and mercury
- › Cost-effective DIY filter replacement kits available with easy-to-follow instructions
- › Available to rent (WA only) and buy
- › Easily connected to mains-fed water chillers and coolers
- › Commercial W2W Twin Filter Systems available – please contact us for details

### How does a W2W Twin Filter System work?

W2W Twin Filter Systems must be plumbed into your cold water supply under the sink, using the hoses and fittings provided.

Once fitted, water is filtered through the sediment and carbon filters collecting unwanted chemicals (including PFAS), dirt, pesticides and other contaminants.

Clean, fresh healthy drinking water is then available 24/7 via the slimline faucet fitted to the sink.

Much of Australia's water has a high mineral, metal and calcium content and a mains-fed water filtration system is a cost-effective way to provide safe drinking water for you and your family.

In areas with poor-quality source water, we recommend pairing a twin filter system with a reverse osmosis filter to reduce excess salts, metals, chemicals, bacteria, and viruses for ultimate water purification.

## Maintenance and servicing W2W Twin Filter Systems

To maintain performance and guarantee the quality of your drinking water, we recommend replacing filters every 6 to 12 months, depending on usage and the quality of the source water.

Water2water sells great-value Do-It-Yourself (DIY) filter replacement kits.

## Does it come with a faucet?

Yes. Our W2W Twin Filter system comes with a slimline faucet which must be fitted to your sink top. Enjoy clear, fresh water at the touch of a lever.

## Can my water be chilled with this system?

Yes. A mains-fed under-sink chiller or cooler can easily be attached to ensure cool, refreshing water is available 24/7.

## W2W Twin Filter Systems v Reverse Osmosis

W2W Twin Filter Systems remove harmful contaminants and leave the healthy minerals our bodies need without wasting any water during the filtration process.

Reverse Osmosis (RO) removes up to 99% of ALL minerals, chemicals including PFAS and metals from water, which is good in areas with particularly poor source water quality. The RO process uses up to 3 litres of water to provide 1 litre of filtered water.

## Contaminants removed by Sediment and Carbon Twin Filters

|                   | Up to |
|-------------------|-------|
| Chlorine          | 99%   |
| Pesticides        | 99%   |
| DDT               | 99%   |
| Endrin            | 99%   |
| Lindane           | 99%   |
| Aldrin            | 99%   |
| Benzene           | 99%   |
| VOCs              | 99%   |
| Atrazine          | 99%   |
| Fluoranthene      | 99%   |
| Phenol            | 99%   |
| Trihalomethanes   | 99%   |
| Perchloroethylene | 99%   |
| Tannic Acids      | 99%   |

## Clients in Western Australia

Water2water's head office is in Perth, and we have a professional team of water filtration technicians living and working across Western Australia.

We offer **FREE** standard installation (conditions apply) on a range of domestic water filtration systems across WA.

We also offer comprehensive servicing and maintenance plans which include regular scheduled visits by one of our water filtration technicians to change filters, clean, and sanitise the system.

Installation, scheduled servicing and filter replacement are included with many rental plans in WA.
