

W2W Whole Home Water Filtration System

Enjoy clean, freshly filtered water throughout your home or workplace with this powerful 3-stage whole house filtration system from Pentair.

W2W Whole Home Water Filtration System

Remove chlorine and contaminants from the water coming into your property with the Pentair 3-stage filtration system to enjoy unlimited clean, freshly filtered water from every faucet and appliance.

- › Enjoy unlimited fresh, healthy, drinking water from every tap in your home or workplace
- › Pentair 3-stage Sediment, Carbon and Scale Reduction Filters remove chlorine, dirt, and bacteria and protect your water pipes from rust and scale buildup
- › Perfect for families and businesses like hairdressers, cafes and restaurants who need clean filtered water to feed coffee and ice machines, dishwashers and other appliances
- › Eliminates the need for plastic drinking water bottles, and is kinder to the environment
- › Professional installation service available for clients in Western Australia
- › Combine with a mains-fed Water Softener to also remove Calcium
- › Removing calcium protects appliances like washing machines, kettles and showers from calcium build-up and is kinder to skin and hair
- › Cost-effective servicing and maintenance plans include regular filter replacement and system sanitisation to guarantee performance and water quality – only available in WA

How does a W2W Whole Home Water Filtration System work?

The W2W Whole Home Water Filtration System is plumbed into your mains water supply before it enters your home or workplace.

Once connected, mains water passes through the Pentair's 3-stage Sediment, Carbon and Scale Reduction filters which remove dirt, rust, metals, bacteria, chlorine and other unwanted chemicals and contaminants.

You and your family or colleagues can then enjoy healthy clean water from every tap in the property.

Water2water has been creating and installing whole-house filtration systems for domestic and commercial customers for over 25 years.

Additional filters can easily be combined, including Reverse Osmosis and UV systems.

To remove calcium and achieve the ultimate complete household filtration system, combine with a mains-fed water softener. This will leave you with softer, healthier skin and hair and reduce scale build-up in water-fed appliances and heating systems.

About Whole House Filtration

Sediment filter removes dirt, rust, and sediment deposits.

The carbon filter captures bacteria and removes chlorine and chlorine by-products (trihalomethanes).

The third stage will help to protect your home appliances by reducing scale.

Removing Calcium from your water

Combining this Whole-House filter system with a dedicated Water Softener will also remove calcium, leaving your water silky soft.

We offer a range of combined water filtration and softening systems for the ultimate in complete household filtration.
